7.1.1] Inverted Star Pattern

A) ALGORITHM

Step 1: Start

Step 2: Read an integer n (number of rows).

Step 3: Initialize a loop from i = n down to 1 (decrement by 1 each time).

Step 4: For each value of i, print i stars (*) in the same line without spaces.

Step 5: Move to the next line after printing stars.

Step 6: Repeat Steps 3 to 5 until i becomes 0.

Step 7: Stop

B) PYTHON CODE

```
n = int(input())
```

```
for i in range(n, 0, -1):
```

```
    print("*" * i)
```

7.1.1 Inverted Star Pattern

05:20

Submit

Write a Python program to print an inverted right-angled triangle star pattern.

For a given number n , the program should print n rows of stars where the first row contains n stars, the second row contains $n - 1$ stars, and each subsequent row has one less star than the previous row, ending with 1 star in the last row.

All rows should be left-aligned with no spaces between the stars.

Input Format:

Single line contains an integer n representing the number of rows

Output Format:

Print an inverted right-angled triangle star pattern with n rows

Note:

Refer to sample test cases for better understanding.

starPrint.py

Submit

```
1 n = int(input())
2 for i in range(n, 0, -1):
3     print("x" * i)
```

Average time: 0.002 s, Maximum time: 0.003 s

3 out of 3 shown test case(s) passed

3 out of 3 hidden test case(s) passed

Test case 1 3 ms

Expected output: 3

Actual output: 3

Test case 2 2 ms

Expected output: 3

Actual output: 3
