9.1.1: Count Vowels in a String - 1

09:55

Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Input Format:

A single line contains a string that may contain letters, numbers, and punctuation.

Output Format:

An integer representing the total number of vowels in the input string.

Sample Test Cases

Explorer

vowel_co...

1 # Type Content here...

2 inp = input()

3 count = 0

4 for ch in inp:

5 if ch in 'A', 'E', 'I', 'O', 'U', 'a', 'e', 'i', 'o', 'u':

6 count += 1

7 print(count)

Submit

Average time
