

10.1.1 Remove Punctuations from a String

A] Algorithm

Step 1: Start

Step 2: Read input from the user and store it in variable a

Step 3: Initialize an empty string chk = ""

Step 4: For each character i in a, do the following:

Step 4a: If i is alphanumeric or a space, add it to chk

Step 4b: Otherwise, ignore i

Step 5: Print the string chk

Step 6: End

B] code

```
a = input()
chk = ""
for i in a:
    if i.isalnum() or i.isspace():
        chk += i
print(chk)
```

C]Output

10.1.1. Remove Punctuations from a String

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

```
1 s = input()
2 result = ''
3 for ch in s:
4     if ch.isalnum() or ch == ' ':
5         result += ch
6 print(result)
```

Average time: 0.006 s (6.50 ms) | Maximum time: 0.011 s (11.00 ms)

4 out of 4 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case	Expected output	Actual output
Test case 1	Hello, World!	Hello World!
Test case 2	Hello World	Hello World
Test case 3
