

11.1.1 Sum of Digits of a Number

Algorithm :-

- Step 1: Start the program
- Step 2: Input an integer number from the user
- Step 3: Initialize a variable sum = 0
- Step 4: Repeat the following steps while num > 0
- Step 4.1: Find the last digit
→ $\text{digit} = \text{num} \% 10$
 - Step 4.2: Add the digit to sum
→ $\text{sum} = \text{sum} + \text{digit}$
 - Step 4.3: Remove the last digit from number
→ $\text{num} = \text{num} // 10$
- Step 5: Print the result
→ "Sum of digits: ", sum
- Step 6: End the program

FLOWCHART

11.1.1: Sum of Digits of a Number

06:55

Write a Python program that reads an integer, calculates the sum of its digits, and prints the result.

Input Format:

- The program reads an integer input with the prompt "Enter a number: "

Output Format:

- Print the sum of the digits in the format:

Sum of digits: <digit_sum>

Note:

- Some base code was provided (input and print statements). The task was to complete the missing logic.

Sample Test Cases

+

```
1 num = int(input("Enter a number: "))
2 num = abs(num)
3 digit_sum = 0
4 while num > 0:
5     digit_sum += num % 10
6     num //= 10
7 print("Sum of digits:", digit_sum)
```

Average time 0.012 s Maximum time 0.017 s 1225 ms 17.00 ms

2 out of 2 shown test case(s) passed

2 out of 2 hidden test case(s) passed

Test case 1 17 ms	Debug	Test Cases
Expected output		
Enter a number: 123	Actual output	
Sum of digits: 6	Enter a number: 123	
	Sum of digits: 6	
Test case 2 7 ms
